APP YOU  
DREAM

One-stop company for sourcing strategy, design and develop apps, to agile project management and digital marketing services.

Our team of experienced designers and developers builds hybrid apps for startups and businesses. Whether you need an app built from scratch, a rescue mission, or need some extra development resources for your internal projects, our team can meet your goals. We build apps per your requirements and produce tangible results.

# Your Dev APP Partner

We help companies achieve the best possible results by engaging with their audiences in their preferred channels, web and mobile. We cover the app development cycle end to end.

Name your requirements and we will implement them pragmatically and cost effective

# What We Do

## STRATEGY

- Assessing viability of a Start-up/idea
- Collect information & advice from industry experts
- Develop app features, prototype & technical proof of concept

## DESIGN

- We use a combination of qualitative and quantitative research methods to collect the baseline data for users, market and competition.
- We create a UX strategy and we design the design prototypes.

## DEVELOPMENT

We specialize in building functional and feature-rich mobile & web apps. We build Web, iOS and Android apps using latest technologies such as React Native to ensure common codebase and optimal performance.

## QUALITY ASSURANCE

- Functional, Usability and User Interface
- Application Code Testing

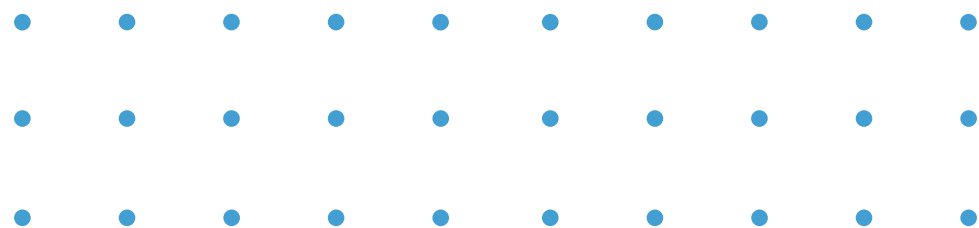

## MAINTENANCE

- Application Maintenance
- New Feature Development

## DIGITAL MARKETING

We provide 360° digital marketing services to promote your app, website, digital product, or service offering.

## DATABASE

# Cross-Platform Apps

Cross-platform app development is about developing a single app that can run on various operating systems instead of developing app versions for each platform. The hybrid approach uses a single codebase to build apps. These apps have a native look and feel due to the mix of native and independent code, fit for multiple platforms. The total cost reduces significantly because of the common codebase.
